Steel door frame + steel door leaf

WARRANTY

10 YEAR WARRANTY
Over 25 years of experience in door production

PORTA KMI POLAND is one of the best known and most innovative door manufacturers in Poland and abroad. For over 25 years we have produced more than 12 million door leaves and door frames. Currently we dispose several locations of production facilities - four plants in Poland, including the most recent built in year 2016, Porta Steel Factory, and one in Romania. This allows us to offer our customers a comprehensive solution in the field of wooden and metal doors. Each month, tens of thousands of new Porta doors are sold in Poland and Europe. Our doors have been installed in many prestigious buildings designed by leading architects and designers. Every step of the doors production process is supervised by qualified professionals, who contribute to maintain a high quality of products. The specialists of Innovation and R&D Departments continually review trends in international design, adapting them to customers’ needs. Porta factories is 105 thousand m² of production and storage space. Porta Factory is also the synonym of modern production facilities equipped with the latest generation of machines dedicated to door leaves and door frames production, supplied by leading european manufacturers. Raw materials and other resources used in the door production process are selected with extreme precision and attention to quality. All that is being done so that our doors may decorate your home over the years.

THE NEWEST AND MOST MODERN PORTA FACTORY

In year 2016 Porta company has relocated the production of steel door leaves and door frames into one of the most modern facilities in Europe which places the company among the very few companies having such a comprehensive offer. The new facility is located next to the already existing factory in Elk City and occupies a total area of approx. 14.5 thousand m². The investment worth more than 70 million PLN allows to achieve not listed previously efficiency of producing one door frame per minute. The modern system of hanger transport with a length of 1.5 km reinforces 75 modern specialised machines and represent only some of Porta Steel prominent symbols.

The factory is environmentally friendly. Intelligent planning allows to fully control the waste. The unique, automated door frame production line, modern varnishing room and the whole machine park from leading european producers make Porta Steel one of the most modern factories in Europe. In addition to the door frame production, the establishment also offers a wide range of steel doors, both internal and external.

MODERN MACHINE PARK

The fully automated varnishing room and 1.5 km of hanger transport system, are only some of examples of newest Porta factory. The most modern machine park from leading European manufacturers is one of the key elements guaranteeing rarely encountered efficiency, flexibility and precision.

COMPREHENSIVE CONSULTING

An experienced team of high qualified technical advisors ensures that the client receive a product with expected parameters in compliance with standards of the building regulations. A special, dedicated offer, which meets the expectations laid down by the building main architect, is developed for investment clients.
THE QUALITY AT THE TOP LEVEL
Implemented many years ago and still maintained Quality Assurance ISO 9001 system, witnessed by proper certificate is a guarantee of repeatability of PORTA products high quality, which is further confirmed by certificates of conformity issued by Building Research Institute.

BEST DESIGN ADAPTED TO THE NEEDS
The team of designers and constructors tracking current global trends, continually updates the Porta offer in this aspect. At the same time a strong emphasis is put on adapting to individual architects’ needs and uniqueness of designs and technical solutions.
WHY PORTA DOOR FRAMES

- ADAPTING TO THE NEEDS
- WIDE OFFER
- STYLISTICS/DESIGN
- QUALITY OF PERFORMANCE
- MODERN MACHINE PARK
- FAST AND EASY ASSEMBLY
- KNOWLEDGE
- QUALITY OF SERVICE
- OPERATING PERSONNEL
ADVANTAGES OF METAL DOOR FRAMES

Steel door frames are widely used in houses, apartments and in places where door operating conditions require a higher resistance to loads, mechanical damages and corrosion. The use of metal materials does not preclude the creation of interesting and structurally advanced products. Well integrated door frames may constitute an architectural detail that bonds the whole interior. The precision of performance combined with a high-quality powder coating in any color, enables manufacturing of a product adapted to individual needs.

DURABILITY
- high durability confirmed with longterm warranty
- exploitation costs reduced to minimum
- high level of humidity resistance
- high quality of finishing coats
- possibility of use in internal and external doors

QUALITY
- perfect performance of each solution

DESIGN
- implementation in accordance with norms of selected country
- possibility of manufacturing in accordance with architectural project
- possibility of adaptation to users needs
- possibility of application of various coats
- efficient and quick assembly
- door frame cooperation with wooden, steel and glass door leaves
ONE DOOR FRAME, MANY POSSIBILITIES

Steel door frames may constitute a set, not only with steel but also with wooden and glass door leaves. Thanks to the wide range of finishing colors the adaptation of a door frame to the style of surroundings and to a door leaf is not a problem. Regardless of the interior and it’s function, a set with a steel frame can be applied practically everywhere.

**Steel door frame + Wooden door leaf**

Such a set is mostly used in houses, apartments, public buildings such as train stations, airports, sport facilities, schools or theaters where high durability and resistance of a door frame is required. To keep a friendly and cozy atmosphere in the interior, a set with a solid steel door frame should be accompanied with a classic wooden door leaf.

**Steel door frame + Steel door leaf**

This is the most classic solution for utility rooms, technical rooms, garages, underground car parkings and basements where an additional security against damages associated with frequent use and difficult environment conditions (humidity, low temperature) is required. The set is available as internal and external doors.

**Steel door frame + Glass door leaf**

Glass door leaf combined with a steel door frame is a very popular choice among architects. This trend is maintained in recent years.

BASIC INFORMATION about steel door frames

PORTA steel frames made with profile shapes of steel sheet 1.2 mm thick are intended to be used in internal interior doors or internal entrance doors. They can be used for such purpose due to the strength requirements in operating terms classified in Class 3, according to the criteria specified in the norm PN-EN 1192: 2001.

PORTA steel door frames made with profile shapes of steel sheet 1.5 ÷ 2.0 mm thick are intended to be used in external or internal entrance doors, including fire resistant doors and with increased resistance to burglary. These door frames can be used due to the strength requirements in the operating terms classified in Class 4, according to the criteria specified in the norm PN-EN 1192: 2001.

VERSIONS OF DOOR FRAMES MANUFACTURING

1- piece (corner, angle-bar) for masonry walls, concrete and plasterboard walls

2- piece (covering) for assembly on masonry walls, concrete and plasterboard walls

3- piece (angle-bar, covering) for assembly on finished wall, easy to assembly

ASSEMBLY METHOD

Various methods of assembly allow to fit to wall and door frame type

which guarantees optimal smoke protection and sound insulation

DOOR FRAMES TYPES

Door frames for unrebat ed doors

Door frames for rebated doors
TYPES OF SHEETS IN STEEL DOOR FRAMES

• STEEL SHEET
type DX51D, DX52D, DX53D hot-dip galvanised (quantity of zinc 100-275 g/m² according to EN 10346)

• STEEL SHEET
type DX51D, DX52D, DX53D hot-dip galvanised (quantity of zinc 100-275 g/m² according to EN 10346), covered with varnished, organic protecting coat

• STEEL SHEET
type DX51D, DX52D, DX53D hot-dip galvanised (quantity of zinc 100-275 g/m² according to PN-EN 10346), covered with decorative, wood-like or colored PVC foil for exterior use

• STEEL SHEET
type DC01 electrolytically galvanised (quantity of zinc 18 g/m² according to EN 10152)

• STEEL SHEET
type DC01 electrolytically galvanised (quantity of zinc 18 g/m² according to 10152), covered with varnished, organic protecting coat

• STAINLESS STEEL SHEET
type 1.4301/1.4307 (V2A) or 1.4404 (V4A) ACCORDING TO EN 10088
SELECTED COLORS OF RAL AND NCS PALLETE

Powder painted door frames can be finished in the available RAL or NCS color and in different type of gloss (gloss, semi-gloss, matt) with increased resistance to abrasion, antibacterial, antigraffiti or antique forming the protection against corrosion for the atmosphere of the class min C3.

STANDARD COLORS INCLUDED IN OFFER

FINISH OF SURFACE

MATT  SEMI-MATT  GLOSS

CORNERS

WELDED
INVISIBLE CORNER LINE

Melt welded door frames are characterised by durable linking (welds, heated elements stiffening and reinforcing the construction) between vertical elements (racks) and a horizontal element (lintel); such measures improve stiffness and durability of a metal frame, which constitutes a base of the door leaf.

FOLDED OR HEATED
VISIBLE LINE OF CORNER CONNECTING

Folded door frames consist of three separated elements (two vertical - racks + one horizontal - a lintel), which are folded in a very easy way during the assembly process, to become a complete door frame. Therefore it can be packed in packets / packages which are easily and safely delivered at the assembly site. They also meet the same requirements as welded frames.
APPLICATION OF PORTA DOOR FRAMES

Thanks to our 25 years of experience, PORTA steel door frames are applied in the highest standard buildings. It will fit in often frequented residential spaces and in less frequented but exposed to greater fluctuations in temperature, humidity or to repeated mechanical damages of its surface.

THE PUBLIC BUILDINGS

Apart from the representative design of interiors of such buildings as airports, railway stations, shopping malls, doors should be made of durable materials. The use of steel door frames is an essential solution to this type of buildings. Thanks to a wide range of Porta manufacturing possibilities, a set of door with a door frame may create an impression of lightness in a solid product. A steel Porta door frame guarantees a perennial reliability in public buildings.

HOSPITALS, CLINICS, PHARMACEUTICAL COMPANIES, LABORATORIES, NURSING HOMES

It is essential that the joinery presents proper parameters in buildings where high hygiene standards are a priority for correct functioning. Steel door frames will be an optimal choice, if we wish to keep cleanliness in patient rooms, examination rooms, operating rooms and in all rooms with increased humidity level.

INDUSTRIAL PLANTS, GARAGES, UTILITY ROOMS

In this type of interiors, steel door frames are the best possible solution. A complete set of doors shall meet fire insulation conditions as the mentioned locations are often used to store flammable materials. The steel, used in door frame production process proves a resistance to deformations and environmental factor’s influence.
RESIDENTIAL BUILDINGS

A practical and more often selected solution for houses and apartments is solid steel door frame. It guarantees not only the safety, but also the durability for years. Modern steel door frames are used in new and older buildings which need to be renovated.

HOTELS, GUEST HOUSES

Buildings where crowds of people appear every day, dragging their luggage and hitting walls with it, require high resistance parameters’ solutions. Furthermore, door sets shall fit in the interior design and architecture of hotels and guest houses. Solid Porta door frames are very easy to maintain, therefore they are perfect for rooms, passages between rooms and other often frequented rooms.

SCHOOLS, KINDERGARTENS, OFFICE BUILDINGS

Thanks to high standards in mechanical resistance and safety of Porta steel door frames, they shall meet the requirements of such areas as offices, schools and kindergartens. It is indispensable to adjust the shape of profiles to use conditions in those areas to minimalize the risk of accident and to ensure the safety of office workers, children and their guardians. In such places, steel door frames with top and side transoms are often used.
MATCH YOUR DOOR FRAME TO YOUR NEEDS

**COLOR**
Match the door frame colour to the surrounding.

**PARAMETERS**
Select door frame parameters to your project’s requirements.

**FUNCTION**
Select door frame features to rooms and buildings.

**DESIGN**
Match a door frame pattern to the function and style of the room.
EXAMPLE OF DOOR FRAME’S ADJUSTMENT TO USER NEEDS USING WOODEN AND STEEL DOOR LEAVES

Door frames in various colours allow to separate kindergarten and school areas. Additional transoms illuminate the halls in the building.
CORNER DOOR FRAME PROFILES

Corner door frames are being mounted on the edge of the wall opening. Their application gives a possibility to anchor the frame on two planes, orthogonal one to another, which gives a better stability of the product in-wall installation.

Corner door frames are perfect for people searching for economical solution, where the main choice factor is the price.

Corner door frames are offered in following versions:
- FIXED
- FOLDED

HAVEN'T FOUND A SOLUTION? CONTACT US / PORTA STEEL /
ANGLE-BAR DOOR FRAME PROFILES

Angle-bar door frame allows to hide visible wall opening surfaces installing a door frame on a wall opening edge at the same time. Thanks to this solution there is no need of fitting the door frame to the wall thickness. In case of extremely thick walls, there is a possibility of assembling it as a corner version.

Angle-bar door frame may be assembled on any type of wall and it constitutes a very rigid load-bearing frame for a door leaf. This solution allows to improve technical parameters of the door sets like burglar resistance, fire resistance or sound insulation. All these features compose a wide range of applications in a set with a door leaf.

Angle-bar door frames are offered in following versions:
- FIXED
- FOLDED
The angle-bar profile of a door frame allows the use of many unique configurational features which contribute to create a door frame adapted to customers’ requirements, in terms of functionality and aesthetics. Picture presents precisely the most important features.

A1 – standard corner of angle-bar door frames
A2 – R = 20 mm corner, large visual effect
A3 – R = 8 mm corner, small visual effect
A4 – door frame with no seal groove – dedicated to swinging doors
A5 – corner of “hidden door frame”
A6 – corner with a chamfer, used e.g. in hospital door frames

B1 – standard door frame dedicated to standard plain or incombustible seal
B2 – door frame adapted to S6586 seal, dedicated to technical door leaves of EI60 fire resistance
B3 – door frame with no seal groove – dedicated to swinging doors
B4 – door frame in tunnel version
B5 – door frame with two seals, dedicated to doors with acoustic insulation parameters

C1 – standard manufacturing, transition by a radius from frontal lapel to the surface of the cut of a door frame
C2 – extending a corner radius to R20, upgraded visual effect – for unrebated door leaves
C3 – a corner with R = 8 mm for unrebated door leaves and door leaves with “R” edge
C4 – a corner of “hidden door frame”

D1 – profile finishing allowing the assembly on a wall with a lapel distant from a wall surface by 9 - 21 mm
D2 – finishing with a decorative, larger R = 8 mm arch
D3 – profile finishing dedicated to assembly on finished wall with no need of extra alteration
D4 – profile finishing separating the wall from installed door frame in order to proceed a correct alteration for a demanded final result
D5 – finishing in “hidden door frame” in plasterboard construction wall coverings

COVERING DOOR FRAME PROFILES

The main advantage of covering door frames is its construction which allows to cover the entire thickness of a wall with the profile. As a result, the assembly of covering door frame can be proceeded on a finished wall.

Installation of this type of door frames guarantees a quick final esthetic result. Fixed frames require precise fit, while the covering door frames in adjustable version allow to adapt to the deviations between the predicted and actual wall thickness of up to 2.5 cm.

Covering door frames are offered in following versions:
- ADJUSTABLE
- FIXED
**COVERING DOOR FRAME PROFILES**

**POSSIBILITIES OF PROFILE BENDING ON EXEMPLARY DIMENSIONS**

**A1** – standard R = 20 mm corner in adjustable door frame with R profile
**A2** – R = 8 mm corner to be used in adjustable and adjustable PS door frames – different visual result
**A3** – standard corner in adjustable PS door frames
**A4** – corner with a chamfer used f. ex. in hospital door frames

**B1** – standard joining of load-bearing profile with additional architrave in adjustable door frame with R profile
**B2** – standard joining of load-bearing profile with additional architrave in PS adjustable door frame
**B3** – standard connection of metal load-bearing profile with additional wooden architrave in Project Profile door frame

**C1** – standard door frame dedicated to standard plain or incombustible seal
**C2** – PS adjustable door frame with no seal groove in a tunnel version
**C3** – Project Premium door frame in a set of metal and wooden elements (load-bearing capacity and door frame natural wood look)
**C4** – door frame with two seals dedicated to doors with acoustic insulation parameters

**D1** – standard door frame, transition from a frontal lapel to the surface of the door frame cut

**E1** – standard finishing with possibility of extension up to 21 mm
**E2** – same finishing as in angle-bar door frames
**E3** – finishing with decorative R = 8 mm arch as in angle-bar door frames

TRANSOMS

Transoms made on the same profile system are a perfect complement to the metal door frame offer. Transoms in a simple and functional way illuminate a room separated by a wall or separate rooms keeping visual communication between them. Such solutions are often used in office buildings, hospitals, schools. Modern Porta machine park allows us to produce metal transoms in many configurations of separated and integrated transoms with a door frame. Integrated transoms are offered in one of top transom variants, left and right side transom or in all in one variant.

DOOR FRAME ASSEMBLY METHODS

CORNER DOOR FRAMES

METHODS OF ANCHORING CORNER STEEL DOOR FRAMES

A) assembly with deflected anchors (a) and expansion bolts (b) (angle-bar small door frames)
B) assembly with deflected anchors (a) and expansion bolts (b) (fire-proof door frames)
C) assembly with deflected anchors (a), expansion bolts (b) (fire-proof door frames) and mounting dowels (c)

ANGLE-BAR DOOR FRAMES

METHODS OF ANCHORING ANGLE-BAR AND FOLDED STEEL INTERIOR DOOR FRAMES

A) assembly with mounting foam only or mortar (no anchors)
B) assembly with metal dowels (a) (plugs made of PVC (b))
C) assembly on plasterboard wall (anchors, (c) self-drilling screws (d))

METHODS OF ANCHORING STEEL FOLDED ENTRANCE DOOR FRAMES

A) assembly of ROMA Standard folded door frames with metal dowels (a) and mounting foam or mortar
B) assembly of PORTA SAFE folded door frames with metal dowels (a) and mounting foam or mortar
COVERING DOOR FRAMES

METHODS OF ANCHORING STEEL COVERING FOLDED INTERIOR DOOR FRAMES

A. Method of anchoring to light door leaves
   a) assembly on plasterboard wall with clamping anchors [a] bolted with screws

B. Method of anchoring to heavy door leaves
   a) assembly of an anchor on plasterboard wall [a] with self-drilling screw
   b) regulation of the dimension and the vertical with regulating elements [b]
   c) fastening of second part of an anchor [c] and bolting with self-drilling screws
   d) installing a door frame stand [d] and screwing in rebate with self-drilling screws
   e) screwing of clamping anchors [e] with screws

METHODS OF ANCHORING STEEL COVERING FIXED DOOR FRAMES ON PLASTERBOARD WALL (S.C. DRY ASSEMBLY)

Assembly on plasterboard wall with self-drilling screws [a] (s.c. dry assembly).

METHODS OF ANCHORING STEEL ADJUSTABLE DOOR FRAMES WITH R PROFILE

A) assembly on masonry wall with expansion bolts [a] and mounting foam
B) assembly in plasterboard wall with self-drilling screws [b] and mounting foam
C) assembly of technical door frames in masonry wall with metal dowels [c] and mortar [d]

Profile filling with plasterboard strips 9.5 mm thick, made during the assembly on a site
Extra filling with mineral wool made during the assembly on a site
The constant filling of rebate profile on its circuit with a mortar
METHODS OF ANCHORING STEEL ADJUSTABLE PS DOOR FRAMES WITH SHARP EDGES

A) assembly in masonry wall with expansion bolts [a] and mounting foam
B) assembly in plasterboard wall with self-drilling screws [b] and mounting foam

METHODS OF ANCHORING STEEL DOOR FRAMES OF PROJECT / PROJECT PREMIUM PROFILE

A) assembly of door frames with PROJECT profile with metal dowels [a] and mounting foam or mortar [b]
B) assembly of door frames with PROJECT profile with mounting foam or mortar [b]
C) assembly of door frames with PROJECT Premium profile with metal dowels [a] and mounting foam or mortar [b]
D) assembly of door frames with PROJECT Premium profile with mounting foam or mortar [b]

**The door leaf thickness measured on vertical edges / more information in Investment Catalogue.**
COMPREHENSIVE OFFER OF PORTA GROUP

A wide selection of Porta doors allows you to choose the right product according to both the customer’s taste and needs. We continuously follow the trends in design, to make our offer valid and attractive. We make sure that the product colours meet the customer’s tastes. At the same time we pay attention to detail, which is why Porta is a brand that combines functional solutions with high quality.

INTERIOR DOORS
in synthetic veneers

We offer a wide range of door designs and veneers for houses, apartments, lofts and offices. Both lovers of classic designs as well as people interested in the latest trends will find a product meeting their needs in our offer.

INTERIOR DOORS
in natural veneers

For the lovers of good taste, impressive and elegant solutions, we have prepared a collection of doors in natural veneers. Here you can find both traditional and modern doors.

INTERIOR
ENTRANCE DOORS

Porta interior entrance doors are available as reinforced doors, fireproof doors and burglarproof doors. It is worth mentioning that the entrance doors have the same colour scheme as the doors to the rooms. Therefore, it is easy to match the colour of the entrance door to the doors inside the apartment.

EXTERIOR
ENTRANCE DOORS

Exterior doors complement the style of the building, as well as provide protection against noise, cold and moisture. Porta doors have exceptional thermal insulation properties, which combined with the use of effective anti-theft solutions ensure a sense of security and comfort.
TECHNICAL DOORS

Technical doors are an indispensable complement to the series of doors used in public buildings, shopping malls, cinemas, etc. Such doors can also be found in use in residential houses. A wide range of Porta technical doors allows to meet all the requirements of the building in the area of fire protection and sound insulation.

STEEL DOORS

The use of high-quality galvanised and acid-proof steel allows us to offer doors resistant to weather conditions and aggressive environments in laboratories, swimming pools, etc. Steel doors are perfect for technical areas of commercial buildings, garages, basements and areas with increased hygienic requirements.

DOOR FRAMES, TRANSOMS

A wide range of Porta door frames, both steel and wooden, makes it possible to match the parameters and properties that meet all the expectations of the designer or user. The same type and colour of the veneer as the door leaf allows us to offer a complete door set with uniform visual and functional parameters.

PANELS, BUILT-IN FURNITURE

Continuously growing interest in door portals and all kinds of built-in furniture was reflected in Porta’s product offer. We offer wall panels made of panels with a properly chosen thickness and any size, veneered with the same veneer as the door. This allows us to create complex, visually uniform built-in furniture in the immediate surroundings of the door.
We will adapt door frame to your needs
Fill in empty spaces with sizes of your door frame
